

1    **ABSTRACT OF THE DISCLOSURE**

2           An automobile escape hammer gun includes a body, a striking hammer  
3   and a lever. The body has a front and a lower passage formed in the body at the  
4   front. The striking hammer is movably mounted in the lower passage, is spring-  
5   loaded and has a bottom tip extending out of the body and an annular lip with a  
6   bottom formed in the body. The lever mounted pivotally in the body and has an  
7   inside end abuts the bottom of the annular lip and an outside end extends out of  
8   the body. Therefore, when the lever is pivoted, the inside end of the lever moves  
9   the striking hammer into the body. The bottom tip of striking hammer will  
10   impact rapidly a window of a vehicle to break efficiently the window when the  
11   annular lip escapes from the front end of the lever.
